

Environmental & Carbon Commitment Policy

Aim: It is our policy to provide excellent service and total customer satisfaction to deliver reliable, responsive service through our technically competent team

Simer Environmental Services Ltd delivers efficient, environmental solutions to industrial and commercial businesses across the South of England. We work with our customers to identify opportunities to improve their environmental performance, efficiency and meet their carbon reduction initiatives through implementing environmental best practice.

Complementing this we aim for greater eco-efficiency in our own business practices. We have documented and implemented an environmental management system (EMS) meeting requirements of ISO 14001. Our EMS supports our commitment to continual improvement and protection of the environment.

We recognise the potential impacts on the environment from our activities and strive to ensure we conduct all our operations according to environmental best practice and in a sustainable way.

We operate a fully integrated management system to ensure we focus on effective management of Quality, Safety and Environmental performance.

We commit to ensuring:

- Compliance with all relevant regulatory and other requirements.
- Effective maintenance activities which maximise performance and extend the lifecycle of equipment.
- Sustainable management of waste utilising the principles of the waste management hierarchy ie eliminate, reduce, reuse, recycle.
- Responsible management of resources, including transportation.
- Support for our customers with their carbon reduction commitment. Striving for energy efficiency, appropriate product selection keeping pace with rapidly changing technology as well as reducing our own utilities usage.

Our objectives are focused on setting realistic targets for improvement supported by programmes to manage actions. We will review, monitor and where needed seek to improve our environmental processes. This is to ensure we continually improve our management system, environmental and business performance.

We will work in conjunction with our staff and supply chain to ensure the requirements of this policy are fully implemented. Through practical actions we are supporting our customers with their 'Net Zero' carbon commitments, reducing their carbon footprint and growing our business in a sustainable way.
